CASE STUDY: The Department of Housing and Urban Development

Problem:

The Navy's Strategic Systems Programs in Washington DC had identified network vulnerabilities in 2001 that made their systems susceptible to intrusion threats and attempts. A lack of security policy development and outdated operational security techniques magnified this problem which needed to be attended to immediately.

Pointe Solution:

Pointe stepped in to provide expert network security support to SSP's secured site in Washington DC. Our Security Analysts identified the cause of network vulnerabilities and emerging threats and helped to install, configure, operate, & maintain industry leading & advanced network security devices including Sidewinder firewalls, intrusion detection systems, Active Directory TCP/IP, Ethernet, FDDI, ATM, and high performance network routers and switches.

Outcome :

Pointe was influential in helping to secure and actively defend SSP's operational networks from military grade intrusion attempts by effectively troubleshooting network security systems and firewalls, while developing policies and procedures that conform to industry standards.
